Streamlined authentication for the hybrid workforce with Yubico and Axiad

Supporting the IT requirements of a hybrid/remote workforce is challenging enough, but ensuring all your users are fully authenticated can be an uphill battle. Users often lose their credentials, let them expire, or don't follow security policies – all of which are exacerbated when organizations implement more credentials to meet varying business needs. Even if an enterprise has invested in new passwordless technology, it can be challenging to deploy new credentials or encourage users to adopt new security standards.

With YubiEnterprise Services, organizations can easily and cost-effectively procure and distribute strong authentication solutions for users at scale. YubiEnterprise Subscription simplifies how businesses procure, upgrade, and support YubiKeys, and YubiEnterprise Delivery is a global service that helps organizations deliver YubiKeys to both remote and in-office users.

Globalize authentication: Distribute YubiKeys to end users in both domestic and international locations, including residential addresses

Streamline distribution: Manage YubiKey inventory with accelerated shipping, tracking, and delivery requests for the remote workforce

Leverage subscription pricing model: Select any YubiKey within your tier for flexibility and convenience, and upgrade to the next tier for the latest YubiKeys

YubiEnterprise Services are complemented by Axiad Airlock. With Airlock, IT teams can assign employees specific directives before they can gain full access to the company system. This means that if they need to activate their new YubiKey, update a certificate, or take the latest security training, Airlock will redirect them to take that action before they can work on any other projects.

Accelerate user adoption: Once an employee's YubiKey has arrived, they are automatically directed to their Axiad User Portal to issue the credential, ensuring quick and simple deployment across your workforce

Standardize security policy: Require employees to take the latest security training before they can access their system, and gain peace of mind that every employee is educated on your security policies, no matter where they are

Reduce help desk calls: By simplifying credential management, employees no longer need to involve help desk. Once their YubiKey arrives or needs renewing, the user is empowered to manage this themselves and allow IT to get back to their projects
