Why Organizations Should Go Passwordless

Passwords have been around for far too long. We know they leave us exposed to cyberthreats. We know they're expensive for IT to maintain and troubleshoot. We know they give employees a major headache trying to remember them all. So how are they impacting our organization? And how do we get rid of them for good?

Impact of Passwords on Your Organization

YOU'RE SPENDING TOO MUCH MONEY ON THEM

The average company spends **$1 MILLION** on password management and re-sets a year

YOUR EMPLOYEES CAN NEVER REMEMBER THEM

25% OF EMPLOYEES forget at least one of their passwords a day

YOU HELP DESK DEALS WITH THEM NON-STOP

Password related issues take up over **40% OF IT'S TIME**

THEY'RE LETTING HACKERS INTO YOUR SYSTEM

99% OF HACKS could be prevented if businesses used MFA instead

How Axiad Helps You

Deploy and manage passwordless credentials all in one platform

YubiKeys, Windows Hello for Business, strong authenticators (such as USB Keys and Smart Cards), mobile authenticators, etc. can all be managed in Axiad Cloud, reducing the time spent by IT and end users on authentication issues

Authenticate people, machines, and interactions, all in one place

Axiad authenticates people (end users and admins), machines (devices and workloads), and interactions (emails and attached documents) so your organization is fully protected.

Enforce better user security behavior

No more procrastinating on issuing credentials or renewing – Axiad Airlock sends your employees straight to their self-service portal as soon as they need to update their authentication

Say goodbye to password-based emergency access

Employee lockouts are inevitable, but no longer require a one-time password for them to regain access – Axiad MyCircle allows them to verify their identity with a trusted colleague and be reset in real time

About Axiad

Axiad delivers organization-wide passwordless orchestration to secure users, machines, assets, and interactions for enterprise and public sector organizations that must optimize their cybersecurity posture while navigating underlying IT complexity. The company's flagship offering, Axiad Cloud, is a comprehensive, secure, and integrated authentication platform that allows customers to move to a passwordless future without the friction and risk of fragmented solutions. Axiad supports the widest range of credentials in the industry including FIDO, mobile MFA, Windows Hello for Business, YubiKeys, smart cards, TPM and biometrics.
